

Topic - How to Find Canon Printer Drivers(600 - 700 words)

Using a printer driver while taking printouts will amazingly minimize the complexity of your printing work. Besides, the people who professionally belong to the printing world are native to [Canon printer drivers](#) and their benefits. Precisely, when it comes to Canon printer drivers, so basically, they are software that your computer uses to speak to a printer, which might be connected to your computer via a network connection. Moreover, the Canon printer drivers send commands for the printouts to the printer and convert the data into the printing format.

Apart from this, use the [ij.start.cannon](#) web link to easily download and install the Canon printer drivers into your system. As you already know, purchasing the printers often comes with discs that include the software necessary to complete your [Canon printer setup](#) process. But, sometimes it happens the printer driver is locally pre-installed on your computer.

Furthermore, using a disc that came with your printer; would help you the best during the installation procedure. And once you insert the disc into your computer, follow the downward steps that prompt on the screen to install the Canon printer drivers.

If you do not have the disc, you can find the Canon printer drivers on its official website [ij.start.cannon](#). Often, people find the printer drivers under “downloads’ or ‘drivers’ on its official [ij.start.cannon](#) website. You download the printer driver and then double-click to

run the Canon printer driver's file. Now, follow the prompts as you move through the download process. And here, it will ask you to select a name for your printer, and also you have to enter your Wi-Fi password to sync your printer to your system by using the network.

Follow the downward steps to installing the Canon printer drivers on your computer via ij.start.cannon web link:

- Start by clicking on the Start button; then, you need to select the devices. And after that, select printers.
- Next, select the 'Add Printer' option.
- Now, click the Add a Local Printer icon and select the Next option; from the 'Add Printer' dialog box.
- Further, choose a Printer Port, which you can select from a drop-down option of existing ports. You can even use the recommended port setting that your computer will select for you. Then, click the Next option.
- Afterward, add your printer driver. From here onwards, either you can add the disc that came with your printer, or you can select the printer driver that you have downloaded from the Canon official website, ij.start.cannon.
- Finally, name your printer and click on the 'Finish' option. And then, go for a test print.

Canon Printer Setup Process-

Once the canon printer drivers installation via ij.start.cannon is complete, move forward with the Canon printer setup process. It would help you the best if you linked your Canon Printers with the Computer to do this. Furthermore, there are two ways to connect; based on your system hardware specification. Below downwards, you can learn about these two ways of the [Canon Printer Setup](#) process:

- **Wireless Setup:** The wireless setup is best for the advanced technology printer with a wireless connection feature. Hence, to establish a wireless connection go to the Wireless Settings screen on your printer. Next, select the Wireless LAN Setup Wizard, and connect to the Wi-Fi to whom your computer is already paired.
- **USB Connection:** You can use the USB cable to establish a connection if your printer is not wireless-friendly. As the USB cable already comes with a printer, you do not need to purchase it from outside. Now, check the cable and insert one end of the USB cable to the computer and the other to the Printer. And, here you are, done with the canon printer setup process.
